Instant Promotion : Web Exploit

Creator: Creator Eddie Points: –

Description

This will require users to do a SQLi to get access to the admin to gain access to the file with the flag.

Github Path: Capture_The_Flame/Web_Exploit/Instant_Promotion

Prompt

Welcome to the new Pineapple Co. Ticketing System! You can use the credentials here to log into your account and get to work!

Username: ATuring
Password: Al@nT0ur!ng

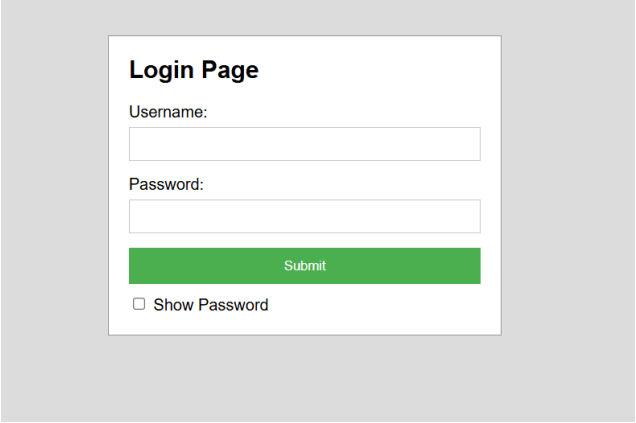
I do wish we can just become CEOs ourselves though. Then we can just forget having to do all this work.

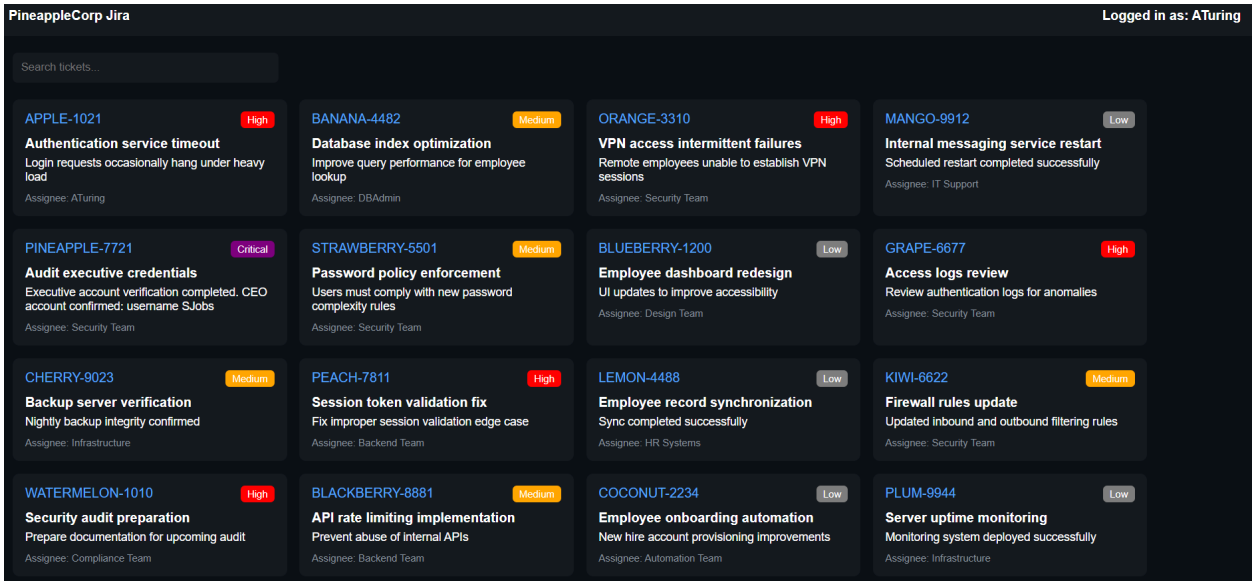
Hints

1. Try logging in and looking at your tickets.
2. If you can find the CEO's name amongst the tickets, I think you can get into his account.
3. Try adding a - - comment out latter parts of SQL queries, making them one of the most dangerous characters.

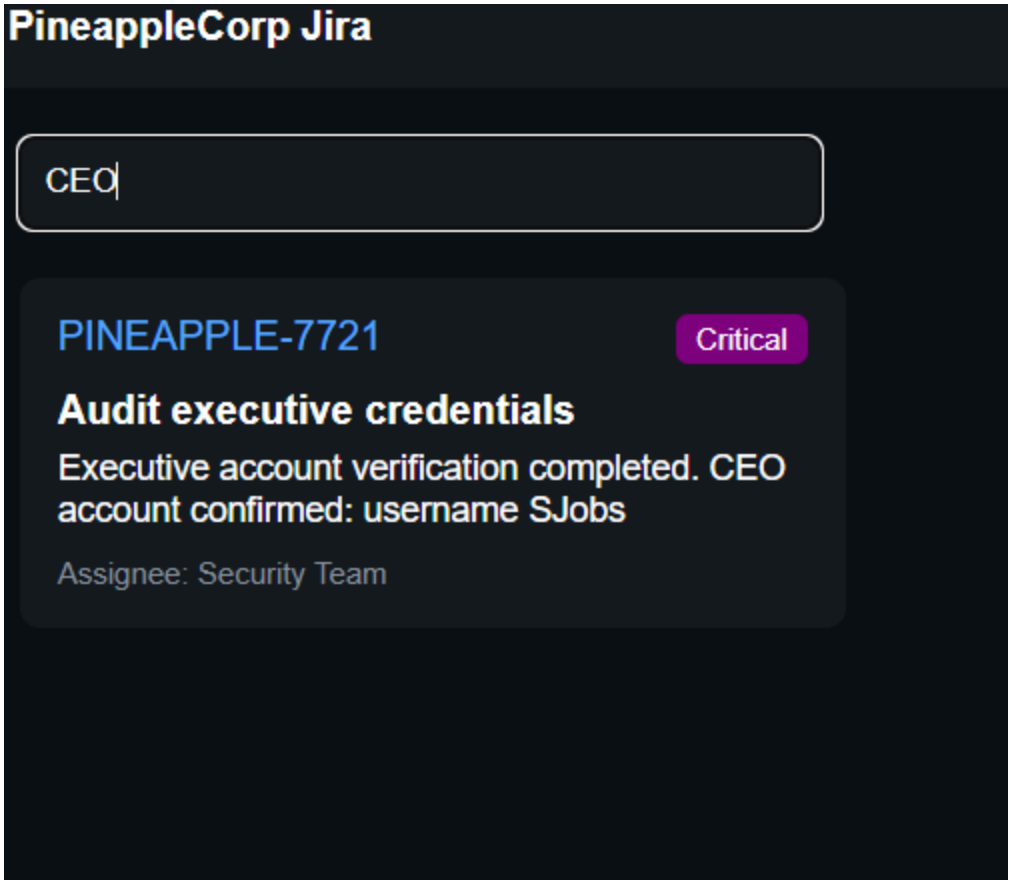
Solution

1. Competitors have to log into the page using the credentials given to them and will see the many tickets that are given to their new account

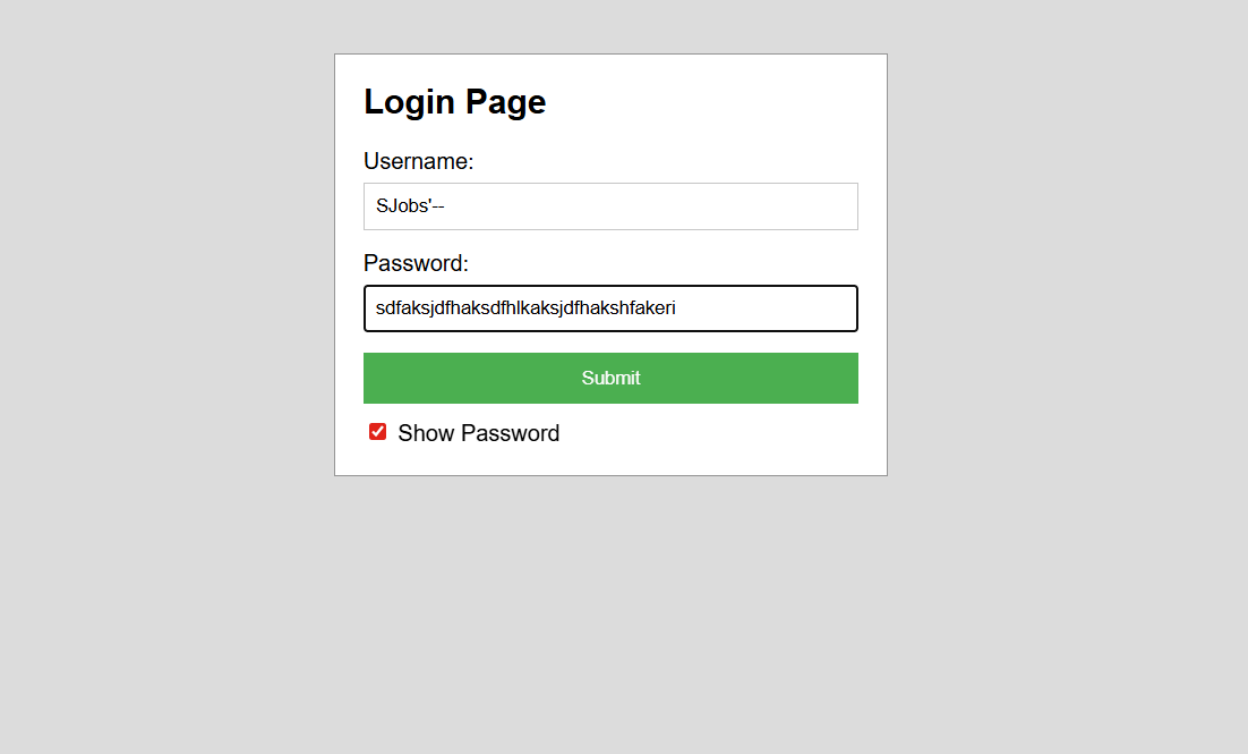




2. Using the search bar, they can look for a ticket that has the word CEO and then get the CEO's username from there

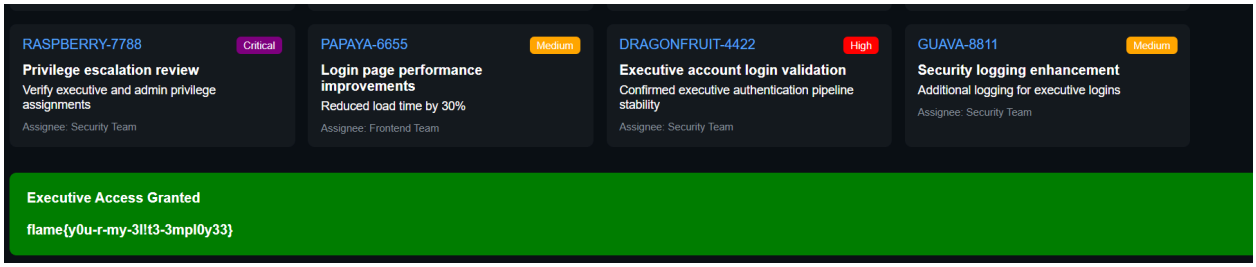


3. Now that they got the username SJobs, they can execute a SQL injection to bypass the password requirement. This can be done by typing in the username followed by ‘-- as shown in the picture



Please let it be noted that the password no longer matters and can be anything. This is because the – comments out the remainder of the query and the password is omitted now.

4. From there they can now access the CEO board which looks the same, until they scroll down and see the flag



Flag
