Three_Blind_Mice : Web Exploit : ADVANCED

Creator: Eddie Points: 500

Description

This challenge is one of our advanced challenges. It features a website that requires the competitor to perform a series of blind SQL injections to get to the flag.

Github Path: Capture_The_Flame_2026/Web_Exploit/Three_Blind_Mice

Prompt

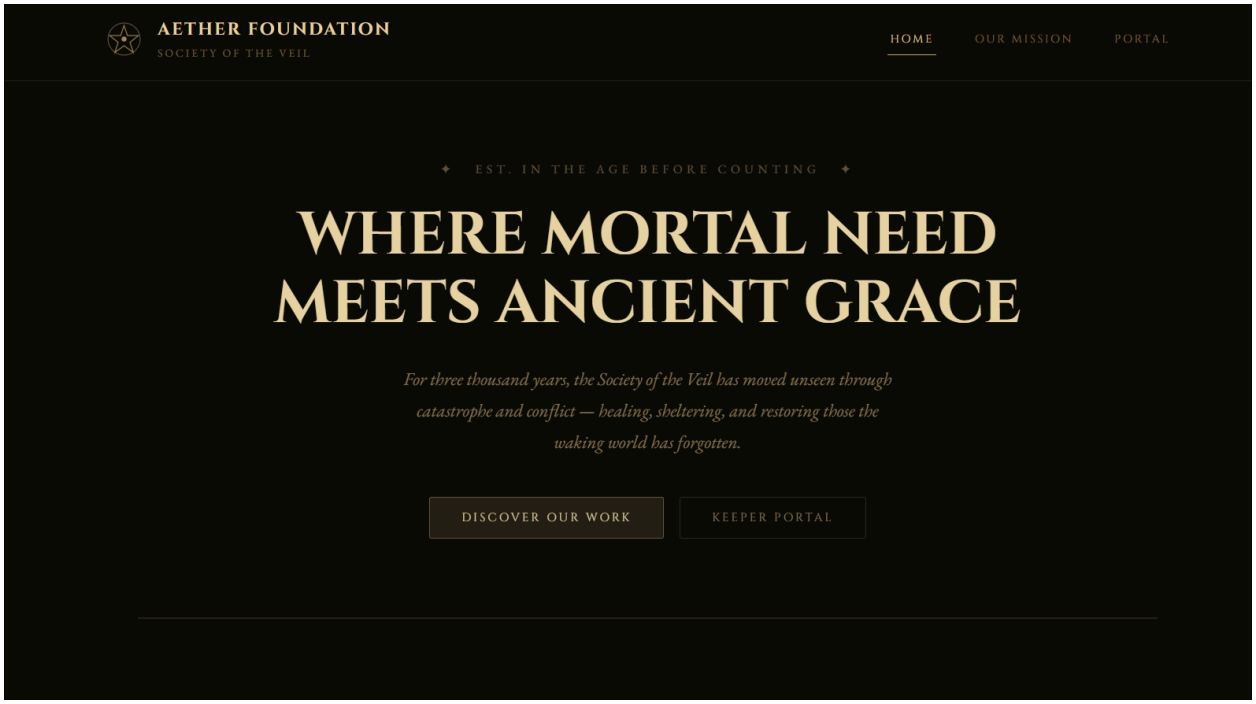
Welcome to the Aether Foundation's security team! We are the king's foundation for kingdom research! We have had a security breach and our website got taken over! It constantly crashes at the most insignificant mistake. Please go through and get into the source of the problem and find the kill switch!

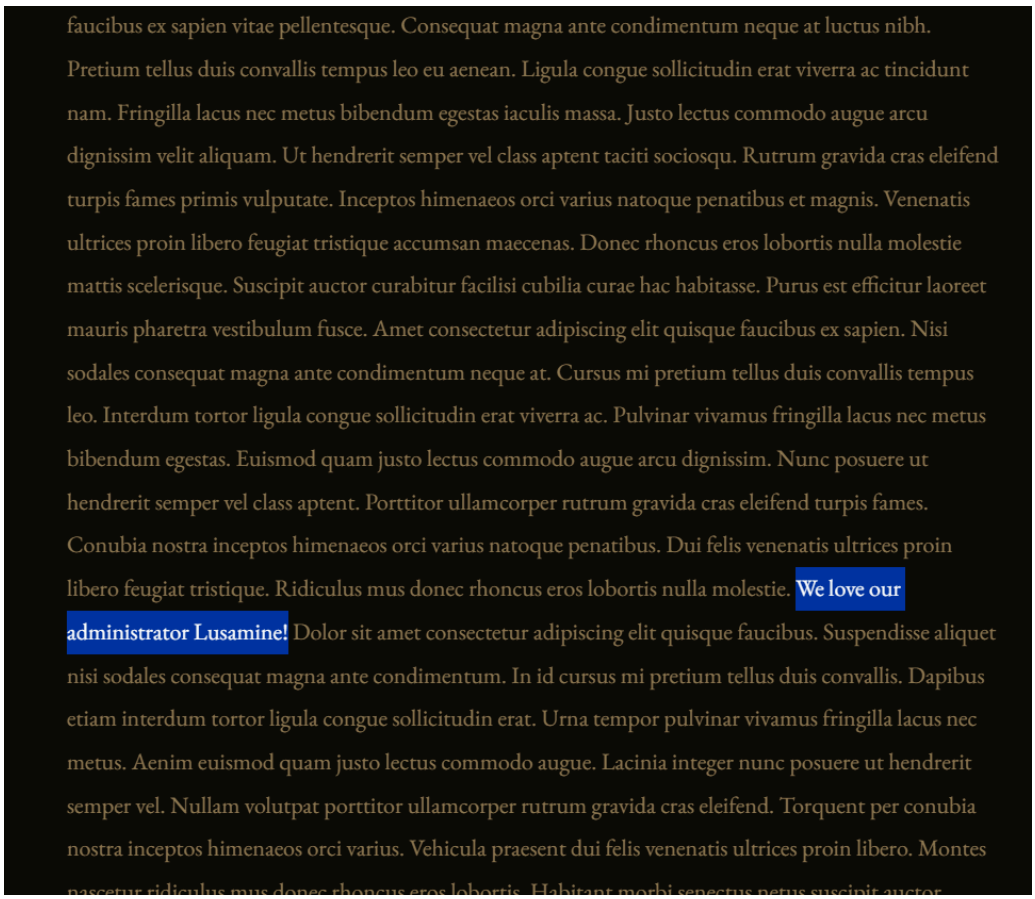
Hints

1. Blind SQL injections are injections that do not tell you errors or give you tables outright. Pay attention to all the information on the screen.
2. The aether foundation was talking about UNIONizing

Solution

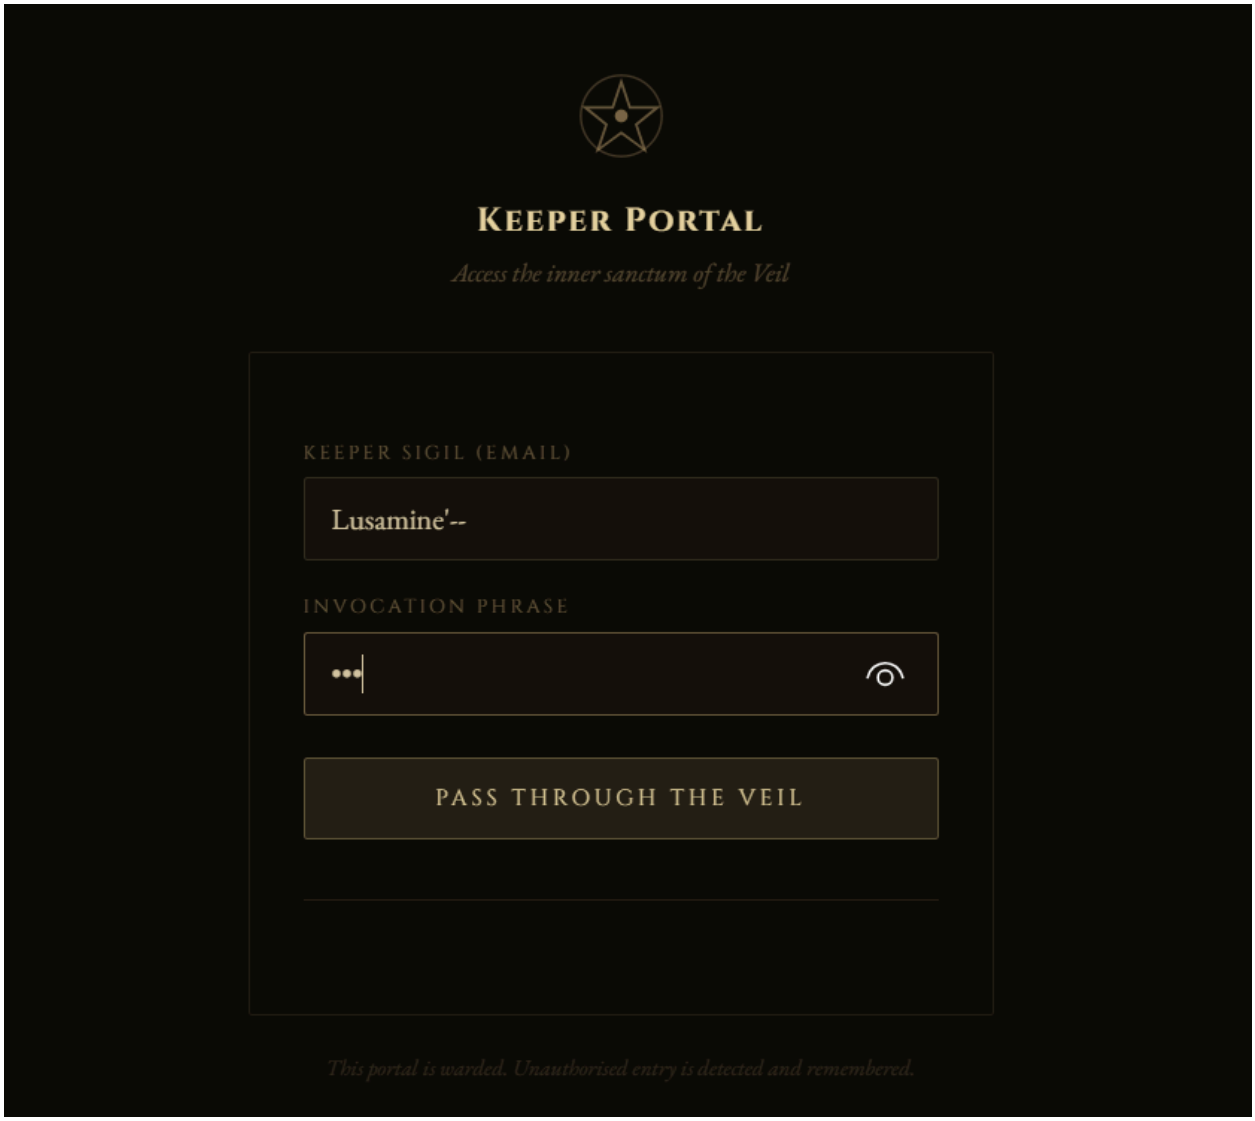
1. Upon landing on the page, the user will be met with the landing page that they can use to investigate their first injection. If you go to the 'Our Mission' tab, you will see the Lorem ipsum mess but inside of there the message "We love our administrator Lusamine" is hidden.



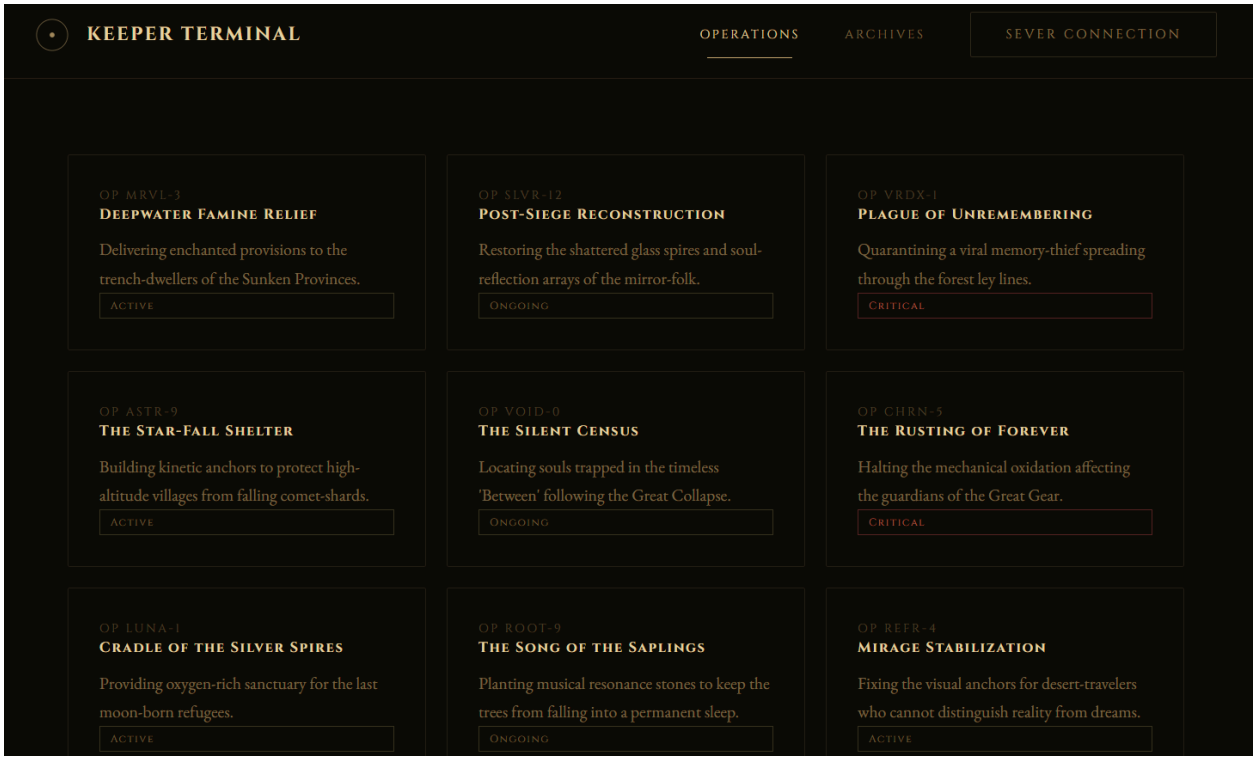


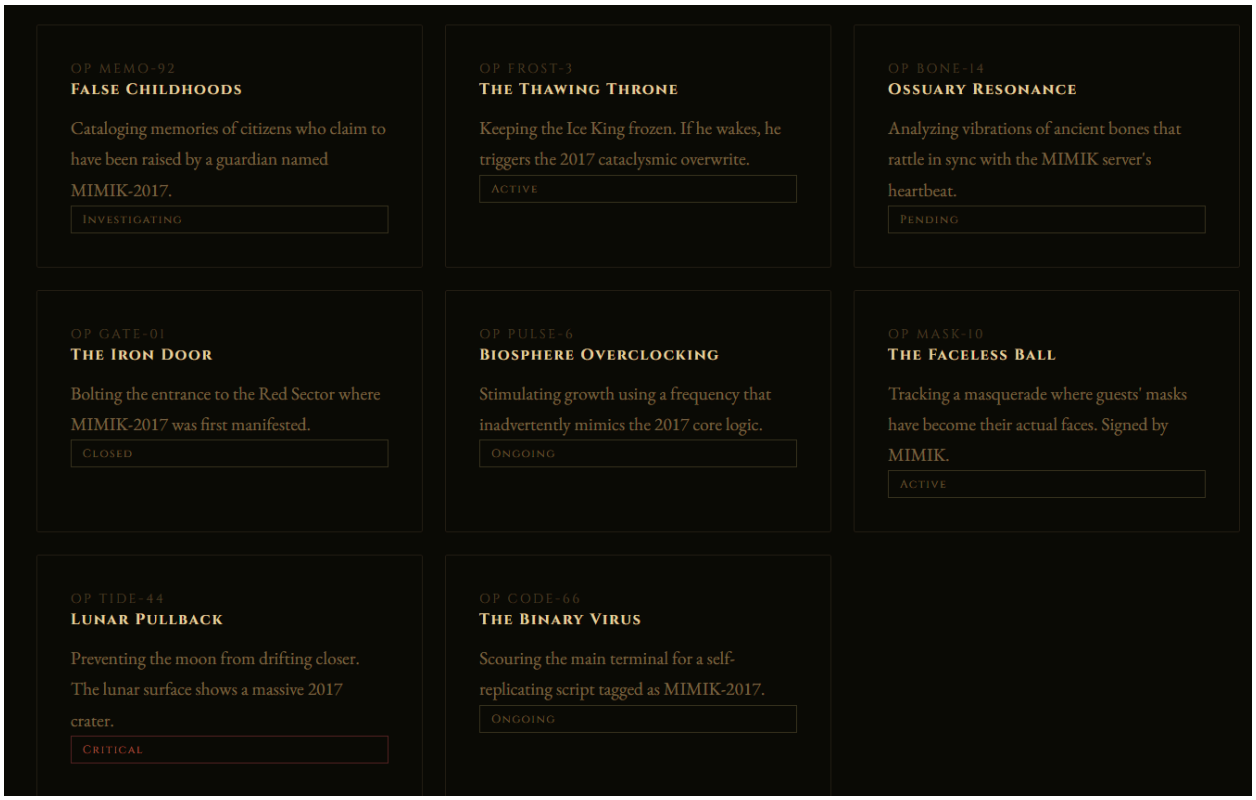
2. From the information about the lorem ipsum, the user can go through and log into Lusamine’s account using the login exploit

Lusamine'-- in the username with any password



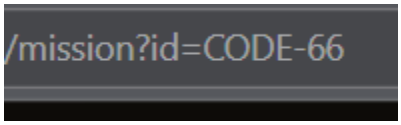
3. Once logged in, they will see the dashboard, many have random information but the last few all reference this MIMIK-2017 which is currently unlisted among all the missions

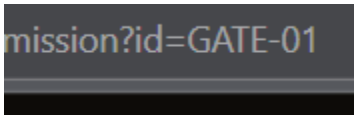


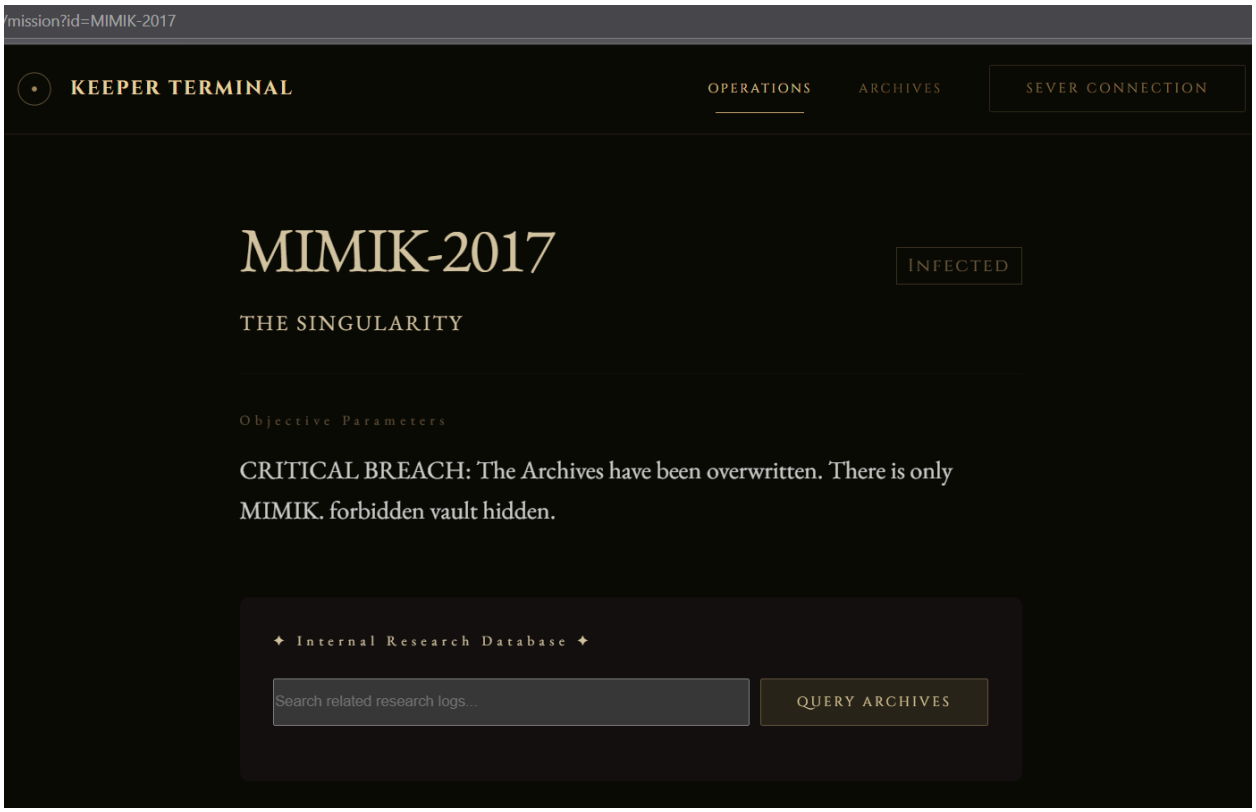


4. After clicking on the missions, the user can see in the search bar that they id of each mission is being used in the search bar during redirection which can be used to exploit the website

The user will then have to put in the path
/mission?id=MIMIK-2017
Which will then redirect them to the hidden mission



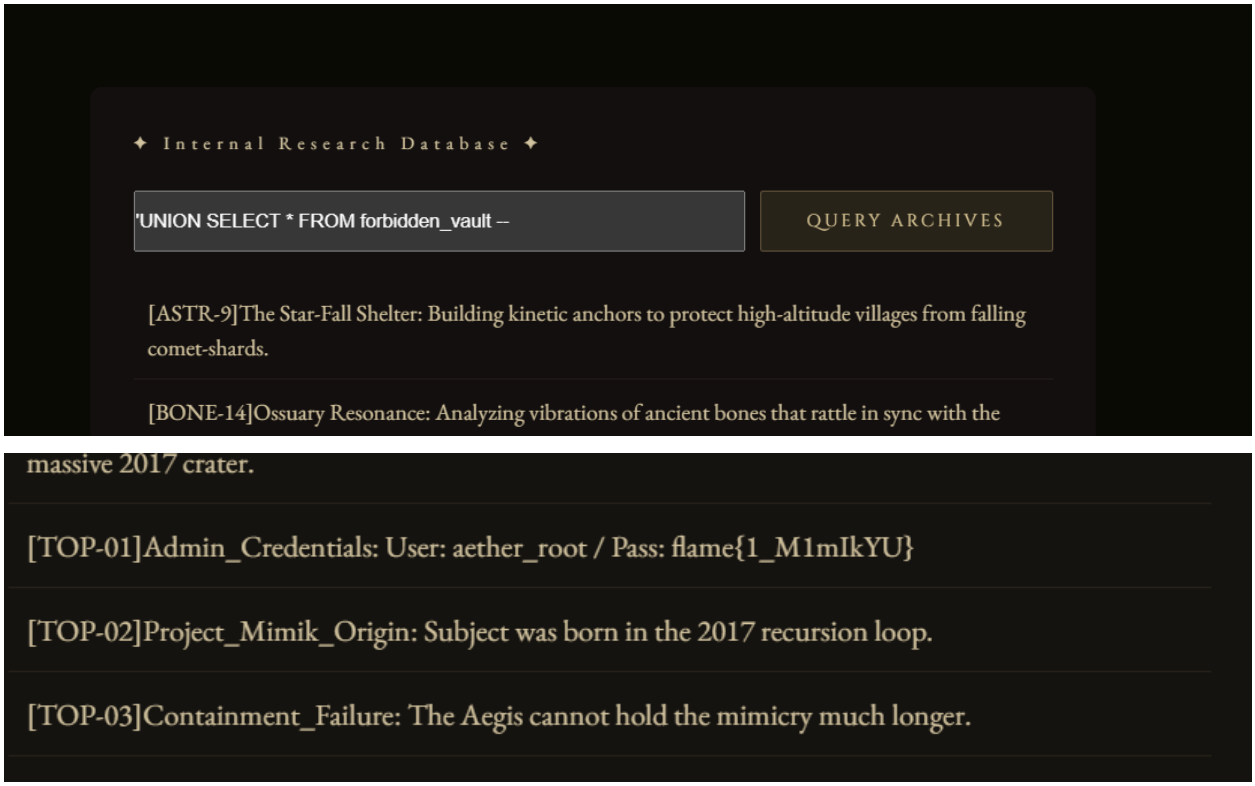




5. From here it mentions that the “forbidden vault is hidden” so that will be the last injection. In the search bar, the user can look for similar missions and this is where they will inject the new query.

They can type
‘UNION SELECT * FROM forbidden_vault –

This will union the hidden table and return all the missions alongside the forbidden vault information where the flag is hidden.



Flag

`flame{1_M1MIkYU}`
