## Description

This is an OSINT challenge where users are provided 3 riddles and they need to solve all 3 for the flag. The answer to one riddle helps solve the next. The riddles are a mismash of horror, chemistry and monsters, so knowledge of either is helpful.

Github Path: /OSINT/Framed_Filmmaker

## Prompt

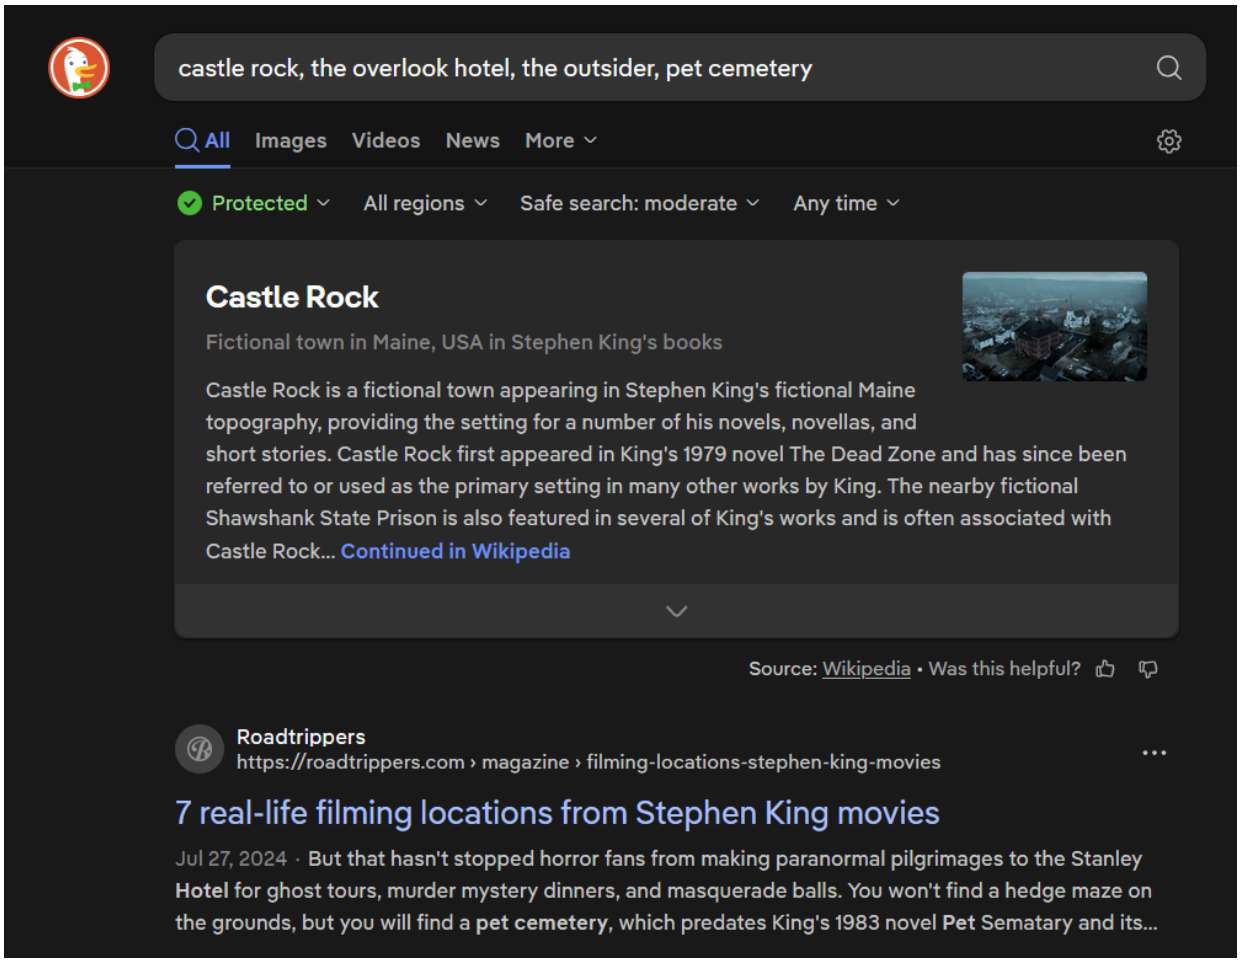
A filmmaker was recently apprehended for making a bad film. He claims he was framed, and the evidence to prove his innocence lies in a locked safe. The safe has a 4 digit pin, and because the filmmaker fears someone might be watching or listening, he can not give it to you directly. Instead he has left notes to help you crack the pin, which tests your film and science knowledge, so can you help him get out of prison?

## Hints

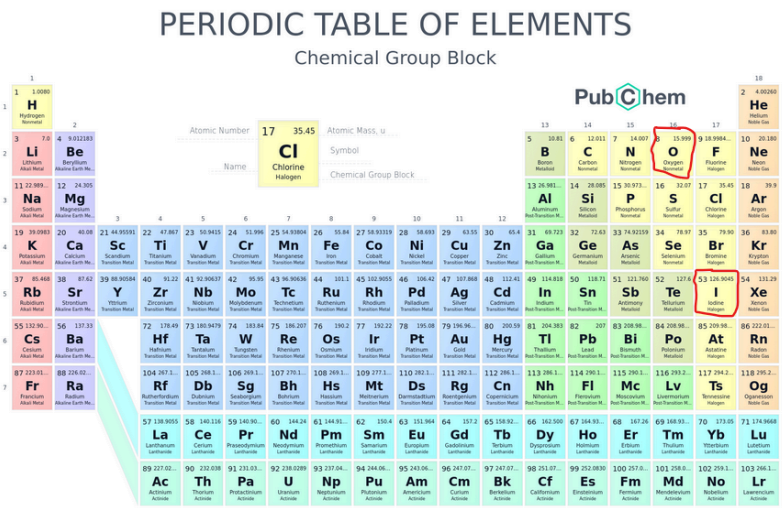
1. Look up the locations mentioned in note 1, what do they all have in common?
2. Look up the periodic table for note 2, and once you do the swap, read the question again.
3. Note 3 directly refers to the answer of note 2.

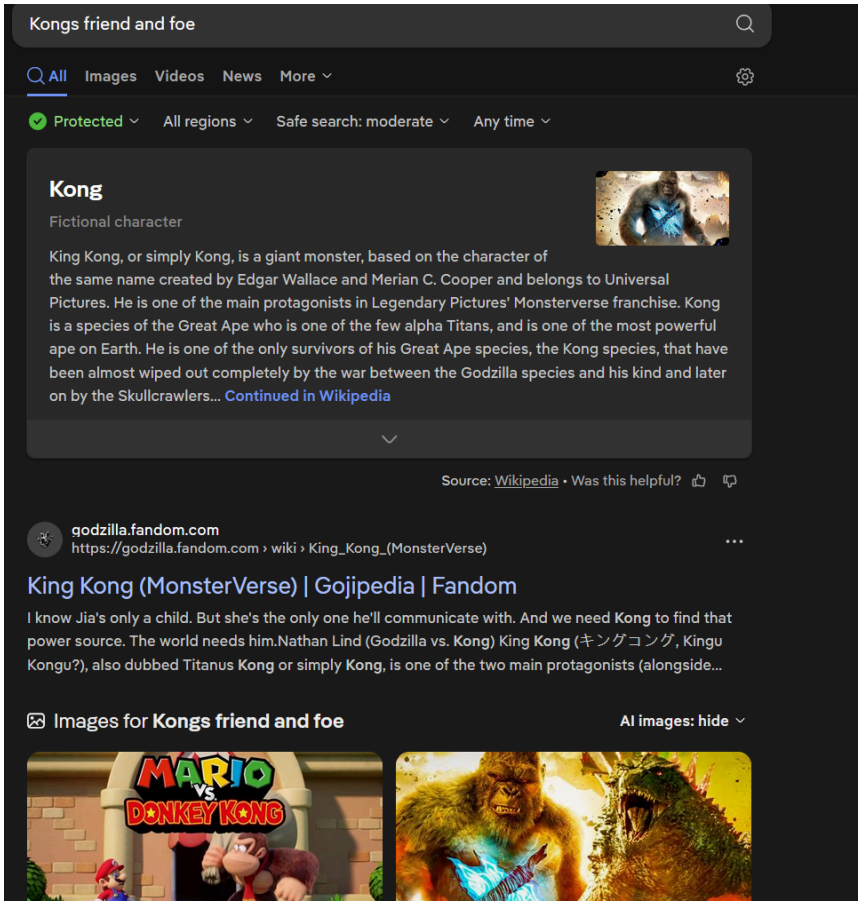
## Solution

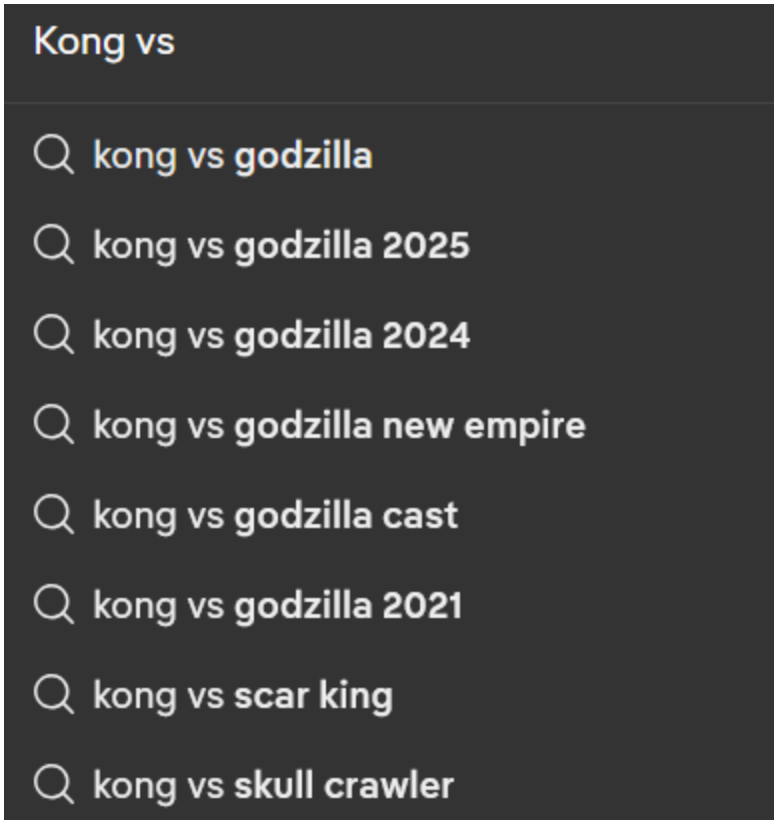
1. The locations in note 1 are: castle rock, the overlook hotel, the outsider, pet cemetery. If we look these up we see that Castle Rock is a TV show adapted from the works of Stephen King, The Overlook Hotel is the setting of The Shining, a book by Stephen King, The Outsider and Pet Sematary are books by Stephen King. There are also other references such as Carrie (book by Stephen King) and “few clowns” referring to Pennywise from IT (another book by Stephen King). So the answer to note 1 is Stephen King.



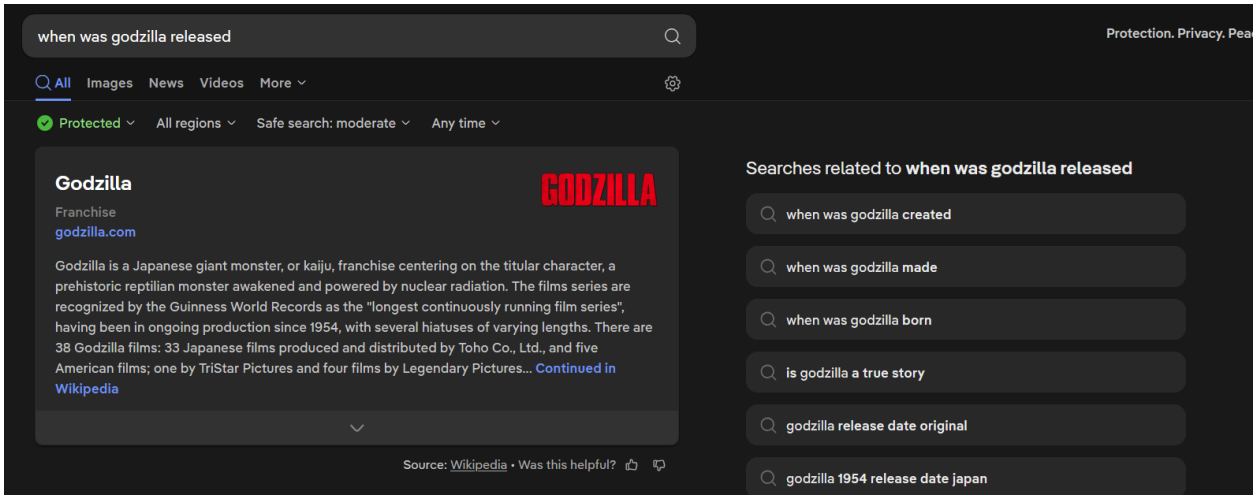
2. If we take the last of IT (the capitalized it being a red herring, and it being the last name), we are looking at King. When we swap the Iodine (I) for Oxygen (O), we get Kong. The question asks who is both a friend and foe? If we look up Kongs friend and foe / who has Kong fought with and against, we get Godzilla.







3. Third third note refers directly to Godzilla and if we look up when was I (Godzilla) released, we get 1954, which is the final answer -> 4 digit pin.



## Flag

flame{1954}
